Title : IBM Maximo Asset Management V7.1 Implementation

1. An attribute is added to a ClassStructure record in the Classifications application.  
On which applications will the attribute be copied to existing records that use this classification?
- A.Assets, Item, Locations
  - B.Job Plan, Ticket Template, Item
  - C.all applications that have a Specifications tab
  - D.Assets, Item, Job Plan, Preventive Maintenance

Answer: A

2. Which statement is correct?

- A. The classification of a rotating Asset is determined from the classification belonging to its rotating item. The value of an Asset specification record is always updateable.
- B. The classification of a rotating Asset is determined from the classification belonging to its rotating item. The value of an Asset specification record is determined from the corresponding attribute's value on the item specification.
- C. The classification of a rotating Asset can be entered by the user and the Asset specification is derived from the classification you enter. The value of an attribute can be entered by the user. There is no relationship with the item specification.
- D. The classification of a rotating Asset is enterable only if its rotating item has no classification of its own. When the classification has been entered by the user on the Asset, the attribute values are updateable. Otherwise, they are read-only and are determined from the corresponding attribute's value on the item specification.
