Quality and Value for the 000-419 Exam

[Just4Exams Practice Exams](#) for IBM IBM certifications III 000-419 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

100% Guarantee to Pass Your 000-419 Exam

If you do not pass the IBM certifications III 000-419 exam on your first attempt using our Just4Exams **000-419 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

Downloadable, Interactive 000-419 Testing engines and PDF Version

Our Exam Preparation Material provides you everything you will need to take a [IBM certifications III certification](#) examination. Details are researched and produced by [IBM Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : IBM 000-419

Title : IBM InfoSphere Quality Stage v8 Examination

1. Click the Exhibit button.

The exhibit displays an example of distribution of weights for matched and unmatched records.

To further separate the distributions and improve the distinction of matched and unmatched records, which three statements are true? (Choose three.)

- A. Add disagreement weight overrides which will decrease the match composite score.
- B. Decrease the number of variables in the match to allow remaining match fields to have more discriminating power.
- C. Add more variables to the match to provide additional information in calculating the match composite score.
- D. Lower the clerical cutoff and increase the match cutoff.
- E. Add agreement weight overrides which will increase the composite match score.

Answer: ACE

2. Which two steps occur when executing a match? (Choose two.)

- A. summing records
- B. isolating a subset of records to process using blocking strategy
- C. incrementing a group of records using hashing strategy
- D. scoring records

Answer: BD

3. You are obtaining product data from a new parts vendor. In your processing design you are using the Reference Match stage to ensure these new parts are valid. This stage can deliver up to six outputs as a result of this match processing. What are three of these outputs? (Choose three.)

- A. Data Duplicate
- B. Data Filtered
- C. Clerical
- D. Sorted
- E. Match

Answer: ACE

4. What are the two Match Specification probabilities that can be configured? (Choose two.)

- A. m probability
- B. u probability
- C. r probability
- D. pi probability

Answer: AB

5. Some records in the Name column may contain a valid data value such as "Jane Doe" and some records contain a NULL. The Name column is not used as a blocking variable. Which action can be performed in the match specification to penalize records for containing a NULL in the name column?

- A. Increase the Match Cut-off setting.
- B. Change the Data Source Missing Weight.
- C. Add a Weight Override for disagreement weight.
- D. Change the Weight Override Conditional Data setting.

Answer: B

6. What is a result when you increase the match cut-off setting?

- A. It minimizes the false positives.
- B. It minimizes the false negatives.
- C. It adds agreement weight.
- D. It subtracts agreement weight.

Answer: A

7. When testing a reference match specification, which two statements accurately describe what should be performed? (Choose two.)

- A. Match frequencies must be generated to have no overlap.
- B. Match frequencies must be generated for the source file.
- C. Match frequencies must be generated for the reference file.
- D. Match frequencies must be generated to have some overlap.

Answer: BC

8. When running Word Investigation, producing a pattern report will help you do what?

- A. Refine a standardization rule set.
- B. Decide which fields to use for blocking fields.
- C. Discover inconsistencies in data type representation.
- D. Identify which patterns should survive.

Answer: A

9. In a sample data set of 10,000,000 records, the Social Security number has 90 percent distinct values. To ensure that the Social Security number does not over-discriminate based upon its rare occurrence, which statement is true?

- A. Change the u-probability on the match command screen from .01 to .0000001.
- B. Set special variable handling "CRITICAL".
- C. Set special variable handling "NOFREQ".

D. Do not use the Social Security number in a match command.

Answer: C

10. Click the Exhibit button.

Examine the statistics shown in the exhibit.

How many candidate groupings were processed for the data in Match Pass - CUSTOMER_ZIP3?

A. 4

B. 19

C. 14

D. 23

Answer: C
