Exam : IBM 000-714

Title : IBM U2 UniVerse V10.1 for UNIX and Windows Administration

1. Which option located in 'uv/bin' (UNIX) or 'uv\bin' (WINDOWS) is used to clean up UniVerse licenses?

- A. uvadmsh
- B. uvsetacc
- C. uvictool
- D. uvicregen

Answer: C

2. The 'sh mem' option of the UV System Admin menu allows administrators to

- A. add memory to the system

- B. load compiled BASIC programs into memory
- C. release BASIC record locks held in memory
- D. define addressable memory limits for BASIC programs

Answer: B

3. Catalog Shared Memory is used to minimize memory required for

- A. each UniVerse user log-on.
- B. sharing of multiple printer segments.
- C. simultaneous disk access of user files.
- D. multiple users that execute the same UniVerse program.

Answer: D

4. When users login to an IDEAL flavor account, which method controls the first action taken by UniVerse?

- A. the VOC entry 'LOGIN'
- B. VOC entry equal to the user name
- C. VOC entry equal to the account name
- D. hierarchy using user name, account name, 'LOGIN' entry (if one exists)

Answer: A

5. System administrators may wish to modify the options displayed when the 'interrupt key' is used. Which statement below facilitates the change?

- A. Use ON.ABORT VOC item to disable the BREAK.KEY
- B. Change the ON.BREAK VOC item to trap and proceed
- C. Change the INTR.KEY item in the VOC to your preference
- D. Use the BREAK command to edit which options to display

Answer: C

6. The existence of which file in the UniVerse account determines whether BASIC object code will be loaded into shared memory?

- A. SHM.TO.LOAD
- B. load\_shm\_cat
- C. GLOBAL.CATDIR
- D. GLOBAL.CATALOG

Answer: A

7. Which method allows the configuration of a printer for UniVerse on Windows?

- A. edit &DEVICE& LP1
- B. SP.ASSIGN (options)
- C. Start > Settings > Printers
- D. Start > Settings > Control Panel > Devices

Answer: C
