

## **IBM 000-915**

**Exam Name:** system administration for infomix dynamic server v9

**Q & A :** 163 Q&As

**Pdf Demo**

### **Quality and Value for the 000-915 Exam**

[Just4Exams Practice Exams](#) for IBM Solutions Expert 000-915 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

### **100% Guarantee to Pass Your 000-915 Exam**

If you do not pass the Solutions Expert 000-915 exam on your first attempt using our Just4Exams **000-915 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

### **Downloadable, Interactive 000-915 Testing engines and PDF Version**

Our Exam Preparation Material provides you everything you will need to take a [Solutions Expert certification](#) examination. Details are researched and produced by [IBM Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : IBM 000-915

Title : System Administration for Infomix Dynamic Server V9

1. Using ontape, a level-0 backup is taken on a weekly basis and logs are backed up as they fill. A user recently delete a table from a non-logged database and the table data must be restored. Which of the following will restore as much of the table as possible?

- A. A level-0 restore
- B. A logical log restore
- C. A warm restore of the dbspace
- D. A level-0 restore followed by a full logical log restore

Answer: A

2. A system Administrator needs to know the physical location of a table. Which of the following commands would show this information?

- A. oncheck -pe
- B. oncheck -pr
- C. oncheck -Pr
- D. oncheck -pp

Answer: A

3. The System Administrator is configuring the NETTYPE parameter to set the number of poll threads, for network connections. The administrator would like to allow 100 total users, 2 poll threads, and run the poll threads on network virtual processors.

Which of the following NETTYPE values should be used?

- A. soctcp, 50,2, CPU
- B. soctcp, 2,50,NET
- C. ipcshm, 2,50, NET
- D. soctcp, 2,100, NET

Answer: B

4. The database server is offline. There is a concern about chunk paths and their allocation. Which of the following commands would show the path for each chunk?

- A. oncheck -pr
- B. oncheck -pt
- C. oncheck -pp
- D. onheck -Cdi

Answer: A

5. The database server configuration file contains the following parameter settings.

According to the message log, checkpoints are occurring every 10 to 15 seconds. Checkpoint duration is less than one second.

Which of the following changes will most likely cause checkpoints to occur less frequently?

- A. Decrease BUFFERS
- B. Increase PHYSFILE
- C. Increase CKPTINTVL
- D. Decrease LRU\_MIN\_DIRTY and LRU\_MAX\_DIRTY
- E. Increase LRU\_MIN\_DIRTY and LRU\_MAX\_DIRTY

Answer: B

6. Given the following information.

Which of the following best describes what the output represents?

- A. The database server was started for the first time and performed normal fast-recovery tasks.
- B. The database server was restarted after a normal shutdown and performed normal fast-recovery tasks
- C. The database server was restarted after an abnormal shutdown and performed normal fast-recovery tasks.
- D. The database server was restarted after restoring dbspaces from an archive and a post-archive fast recovery was performed.

Answer: C

7. Which of the following best describes external backups on the IBM Informix Dynamic Server?

- A. An external backup allows backups using onbar or ontape, database transactions are active during external backups.
- B. An external backup allows backups using onbar or ontape, database transactions are suspended during external backups.
- C. An external backup allows backups using operating system or third-party utilities transactions are active during external backups.
- D. An external backup allows backups using operating system or third-party utilities, transactions are suspended during external backups.

Answer: D

8. An Informix System Administrator needs to know how many pool threads are running on a CPU VP. Which of the following commands can be used to do this task?

- A. onstat -g ath
- B. onstat -g dsc
- C. onstat -g glo
- D. onstat -g sts

Answer: A

9. Users are reporting slow response time. It appears that it may be related to cpu utilization. Which of the following commands would show a list of virtual processors and their statistics?

- A. onstat -g ath
- B. onstat - g glo
- C. onstat -g st

- D. onstat -g act
- E. onstat -g ssc all

Answer: B

10. The System Administrator needs to implement a fast system backup strategy. The only requirement is that the backup utility needs to be able to perform parallel backups and restores. Which of the following utilities would work best for this situation?

- A. onbar
- B. ontape
- C. dbexport
- D. external backup

Answer: A

11. The System Administrator needs to know when the latest "update statistics medium" has been run. Which of the following tables will most likely contain this information?

- A. systables
- B. sysdistrib
- C. sysindexes
- D. syscolumns

Answer: B

12. The following is extracted from the output of an onstat -k command.

From the above excerpt, how many exclusive locks are present in the engine?

- A. 0
- B. 1
- C. 4
- D. 6

Answer: C

13. Which of the following sysmaster tables contains similar information as the output from the oncheck - pe command?

- A. syserrors
- B. syschunks
- C. sysptprof
- D. sysextents

Answer: D

14. A non-critical dbspace has been taken offline due to a disk failure. This dbspace contained 10% of the production data. A level-0 archive and logical log backups are available for a restore of the database server, which normally takes up to ten hours.

Which of the following is the best solution to restore the database server?

- A. Do a cold restore and apply the logical logs
- B. Do a warm restore and apply the logical logs
- C. Do a warm restore without applying the logical logs
- D. Do a cold restore without applying the logical logs.

Answer: B

15. A dbspace is almost full and more space is needed. When adding a new chunk to the dbspace, which of following must be considered when specifying the size of the new chunk?

- A. The size of the chunk should be considered but it can be changed after it is created.
- B. Choose the chunk size carefully because its size cannot be changed once it is created.
- C. For better performance, it is better to add a lot of small chunks than one very large chunk.
- D. As a rule of thumb, the size of the new chunk should be twice the size of the previous chunk.
- E. The size of the new chunk should not exceed the total size of all chunks currently allocated to the dbspace.

Answer: B

16. The database server has marked several chunks as "down" in a non-critical dbspac, but the database server is still online. Which of the following methods could restore the data while providing the least amount of downtime to the users of that dbspace?

- A. A whole system restore
- B. A warm restore of the dbspace
- C. A cold restore of the dbspace
- D. A warm restore of the whole system

Answer: B

17. TestInside.com wants the ability to back up only certain tables within their database system. Which of the following methods would satisfy this requirement?

- A. Backup those tables using onbar.
- B. Back up those tables using ontape.
- C. Place the tables in their own dbspaces and backup those dbspaces using onbar.
- D. Place the tables in their own dbspaces and back up those dbspaces using ontape.

Answer: C

18. Which of the following is a performance benchmark for a data warehousing environment?

- A. Write cache rate
- B. Checkpoint durations
- C. Number of lock overflows
- D. Response time of complex queries

Answer: D

19. A data warehousing system has 1TB of data. A batch job is run every night to load new data. No data or schema changes occur during the daytime. Which of the following is the best backup strategy for this database system?

- A. Perform a physical backup after daily batch job completes; run logical log backups
- B. Perform a physical backup before the daily batch job completes; run logical log backups
- C. Perform a physical backup after the daily batch job completes; do not run logical log backups
- D. Perform a physical backup before the daily batch job completes; do not run logical log backups

Answer: C

20. Given a partnum of 0x300034 for a table, which table in the sysmaster database could be queried to determine that actual table name?

- A. systables
- B. sysptnhd
- C. systabnames
- D. sysdatabases

Answer: C
