Quality and Value for the 090-091 Exam

[Just4Exams Practice Exams](#) for SCO Caldera SCO Caldera 090-091 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

100% Guarantee to Pass Your 090-091 Exam

If you do not pass the SCO Caldera 090-091 exam on your first attempt using our Just4Exams *090-091 testing engine and pdf study guide*, we will give you a FULL REFUND of your purchasing fee.

Downloadable, Interactive 090-091 Testing engines and PDF Version

Our Exam Preparation Material provides you everything you will need to take a [SCO Caldera certification](#) examination. Details are researched and produced by [SCO Caldera Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Title : UNIXWARE 7 NONSTOP CLUSTERS CERTIFICATION EXAM V1.0a0

1. Which statement best defines a node within a cluster?

- A. A complete computer(PAM,CPU,disk(s)),connected to the other nodes in the cluster by way of a server area network(SAN)
- B. The SAN cards placed in each machine in a cluster
- C. The LAN cards placed in each machine in a cluster
- D. A computer connected to the other nodes in the cluster by way of a LAN,which contains only CPUs,PAM,LAN,and SAN cards,no other peripherals

Answer: A

2. Which statement best describes the term N+1 failover configuration for nodes?

- A. All resources but one are pressed into service.Loss of a single resource causes failover to another resource,preserving performance.
- B. All resources but one are always pressed into service.Loss of a second resource causes the cluster to become unavailable.
- C. N+1 is a hardware-specific concept that indicates how to configure disks in a node.
- D. N+1 is a software-specific concept that indicates how to configure daemon failover on a node.

Answer: A

3. In UnixWare 7 NonStop Clusters,which resources do NOT need to be protected to prevent unavailability of the cluster in the event the resources fails?

- A. Filesystems,except the boot(/stand)filesystem for each node
- B. Shared memory
- C. semaphores
- D. Video monitors

Answer: D

4. Which statement best describes how SSI is implemented in filesystems on UnixWare 7 NonStop Clusters?

- A. Through the cluster filesystem(CFS),which provides a global view of all filesystems in a single file tree and allows them to be protected for failover.
- B. Through a modifile version of NFS sharing mounts in a special,transparent,inter-node manner.
- C. Through a modifile version of RFS sharing mounts in a special,transparent,inter-node manner.
- D. Not at all.

Answer: A

5. In clustering,a protected resource is one that:

- A. Has special circuits that keep it from being damaged during a voltage surge
- B. Is monitored by special hardware such that if should fail,support engineers will be notified immediately that it need to be replaced
- C. Is monitored by special software to insure that it is not over-used
- D. Is redundant in a cluster to avoid a single point of failure(SPF)and is automatically pressed into service by the cluster in the event the primary component fails

Answer: D

6. You should choose CNM as your protected storage method when:

- A.You want the fastest possible disk I/O performace
- B.You want the lowest-possible window of vulnerability when a node fails
- C.You are willing and able to accept the slower write performance and greater window of vulnerability to reduce the price of the cluster
- D.You dont care about the price of the cluster

Answer: C

7. What is the maximum distance you can run long-wave FDDI cables without any signal modification?

- A. 2 kilometers
- B. 10 kilometers
- C. 2 miles
- D. 10 miles

Answer: A

8. During installation of UnixWare 7 on node 1,you should:

- A. Defer configuration of any networking cards
- B. Defer configuration of all but the first networking cards
- C. Configure any networking cards
- D. Configure any networking card being used for LAN activity but no networking card used for SAN activity

Answer: A

9. Which of the following licenses apply on a cluster-wide basis,as opposed to per-node?

- A. CPUs
- B. RAM
- C. Users
- D. Departmental/Enterprice

Answer: C

10. The key to reliability and availability in a cluster is:

- A. Having lots of spare parts on hand so that if something fails,it can be quickly replaced,causing minimal down time.

B. Having a hardware design that avoids any single point of failure, and a fault-tolerant operating system that knows how to press redundant hardware into service automatically.

C. Staffing the computer system with knowledgeable technicians 24x7.

D. Using the right monolithic computer system.

Answer: B
