Exam Name: LotusScript in Notes for Advanced Developers

Q & A : 84 Q&As

[Pdf Demo](#)

Quality and Value for the 190-273 Exam

[Just4Exams Practice Exams](#) for Lotus CLP 190-273 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

100% Guarantee to Pass Your 190-273 Exam

If you do not pass the CLP 190-273 exam on your first attempt using our Just4Exams **190-273 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

Downloadable, Interactive 190-273 Testing engines and PDF Version

Our Exam Preparation Material provides you everything you will need to take a [CLP certification](#) examination. Details are researched and produced by [Lotus Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : Lotus 190-273

Title : LotusScript in Notes for Advanced Developers

1. Jason finds that his script is not working. He gets an error message at run time. His code is as follows:

```
Dim con As ODBCConnection =====>line 1
Dim qry As New ODBCQuery =====>line 2
Dim res As New ODBCResultSet =====>line 3
Dim qrytxt As String =====>line 4
con.ConnectTo("Suppliers")
set qry.Connection=con
qrytxt="SELECT * From EastSupplies"
qry.SQL=qrytxt
```

```
Set res.Query=qry
res.Execute
```

Which one of the following lines causes the error?

- A. Line 1
- B. Line 2
- C. Line 3
- D. Line 4

Answer: A

2. Sam is creating a script which will return a list of managers into a field on the current document. The list of managers is in the HR.NSF database on the HUB_DUNN/Dunn server. The Managers view lists documents containing managers. Which one of the following will create an object to access the values?

- A. Dim v As New NotesView("Managers")
- B. Dim s As New NotesSession
Dim v As NotesView
Set v=s.GetView("Managers")
- C. Dim db As New NotesDatabase("HUB_DUNN/Dunn", "HR.NSF")
Dim v As NotesView
Set v=db.GetView("Managers")
- D. Dim db As New NotesDatabase("HUB_DUNN/Dunn", "HR.NSF")
Dim v As NotesView
Set v=db.GetView("M")

Answer: C

3. Consider the following:

```
Dim s As New NotesSession
Dim db As NotesDatabase
Set db=s.CurrentDatabase
Dim col As NotesDocumentCollection
Set col=db.AllDocuments
Dim doc As NotesDocument
Set doc=col.GetFirstDocument
fld=doc.docnumber(0)
```

If docnumber is a field defined as text in Domino, which one of the following is the datatype of fld?

- A. Single
- B. Double
- C. String
- D. Variant

Answer: C

4. In order to work with an ODBC source, a result set must be created. How is this done?

- A. Use the Execute method on the ODBCResultSet object only.
- B. Use the ODBCQuery object to define the query and connection.
Use the ODBCResultSet object, Execute method to generate the ODBC data in memory.
- C. Use the ODBCConnection object, ConnectTo method to establish the connection.
Use the ODBCQuery object to define the query and connection.
Use the ODBCResultSet object, Execute method to generate the ODBC data in memory.
- D. Use the ODBCConnection object, Connection property to establish the connection.
Use the ODBCQuery object to define the query and connection.
Use the ODBCResultSet object, Execute method to generate the ODBC data in memory.

Answer: C

5. Emily wants to report on documents in a database. She will use an action button in a view to count documents. The database name is CLIENTS.NSF and it resides on the HUB_DUNN/Dunn server. The button is in the same database on which she is reporting. She wants to implement script that is operational from any replica copy of the database. Which one of the following would be the best method of representing the database in her script?

- A. Dim db As New NotesDatabase("", "CLIENTS.NSF")
- B. Dim db As New
NotesDatabase("HUB_DUNN/Dunn", "CLIENTS.NSF")
- C. Dim db As NotesDatabase
db.Open("HUB_DUNN/Dunn", "CLIENTS.NSF")

```
D. Dim s As New NotesSession
Dim db As NotesDatabase
Set db=s.CurrentDatabase
Answer: D
```

6. Victor is creating a script that will generate multiple values to be put into a single field. Which one of the following strategies should he follow?

- A. Define the field on the form to be multivalued.
- B. Create a scalar identifier, and use a loop which writes the identifier's value to the field.
- C. Create a string identifier which separates values with a carriage return, and write the identifier to the field.
- D. Create an array to contain the values, and assign the array to the item in the document using the extended class syntax

Answer: D

7. Jane is creating a script which deletes a database. The script prompts the user for the location of the database to be deleted, then deletes it. What must she do in order to ensure the NotesDatabase Object (db) is representing a database?

- A. Use the Open property on the NotesDatabase object
- B. Use the IsOpen property on the NotesDatabase object
- C. Use the CreatedDate property on the NotesDatabase object
- D. Open the database using the constructor Sub (New) on the NotesDatabase object.

Answer: B

8. Which one of the following properties allows Jim to change the title on an object of the NotesDatabase class?

- A. The Title property on the NotesDatabase class
- B. The MakeTitle method on the NotesSession class
- C. The IsTitle property on the NotesDatabase class
- D. The MakeTitle method on the NotesDatabase class

Answer: A

9. Consider the following code fragment:

```
Dim s As NotesSession
Set s=New NotesSession
Dim db As NotesDatabase
Set db=s.CurrentDatabase
Dim acl As NotesACL
Set acl=db.GetACL Acl.Addrole("[Enablers]")
```

Which one of the following does this code do?

- A. Updates the ACL with the Enablers group.
- B. Changes all roles in the ACL to Enablers.
- C. Adds the Enablers role to the ACL of the current database.
- D. Returns the Enablers role to the code as a NotesACL Entry.

Answer: C

10. In order to generate a result set, which one of the following must be established in an ODBCQuery object?

- A. SQL property
- B. SQL method and Connection property
- C. SQL property and Connection property
- D. GetError method and Connection property

Answer: C

11. Jason uses script to create documents in a Domino database from a dBase database. He has created an ODBCResultSet object called res in his code. He would like to create documents with two items, Name and City. The item names are the same as the column names in res. He has created a vendor form which contains these fields. Which one of the following will generate this result? (Assume the object db represents the current database.)

```
A. Dim doc As NotesDocument
res.FirstRow
Do until res is nothing
Set doc=New NotesDocument(db)
doc.Form="vendor"
doc.Name=res.GetValue("Name")
doc.City=res.GetValue("City")
doc.Save True,True
```

```

res.GetNextRow
Loop
B. Dim doc As NotesDocument
Dim emptyrow As Integer
emptyrow=res.FirstRow
Do until emptyrow=False
Set doc=New NotesDocument(db)
doc.Form="vendor"
doc.Name=res.Name
doc.City=res.City
doc.Save True,True
emptyrow=res.GetNextRow
Loop
C. Dim doc As NotesDocument
emptyrow=view.GetFirstDocument
Do until emptyrow=False
Set doc=New NotesDocument(db)
doc.Form="vendor"
doc.Name=res.GetValue("Name")
doc.City=res.GetValue("City")
doc.Save True,True
emptyrow=view.GetNextDocument
Loop
D. Dim doc As NotesDocument
Dim emptyrow As Integer
emptyrow=res.FirstRow
Do until emptyrow=False
Set doc=New NotesDocument(db)
doc.Form="vendor"
doc.Name=res.GetValue("Name")
doc.City=res.GetValue("City")
doc.Save True,True
emptyrow=res.GetNextRow
Loop
Answer: D

```

12. Marilyn is writing code which prompts users to specify a database to copy. She wants to make sure the database name specified is correct before a copy is made. Which one of the following sets of properties and methods should she use on the NotesDatabase object?

- A. New method, Open property
- B. IsOpen property, Open method
- C. IsOpen method, Open property
- D. Created property, Open method

Answer: B

13. Which one of the following would Brian use to access a replica of a database on a server?

- A. New on the NotesDatabase class
- B. OpenSame on the NotesSession class
- C. Open method on the NotesDatabase class
- D. OpenByReplicaID method on the NotesDatabase class

Answer: D

14. Andrew is developing LotusScript which will return field values from documents based on user-selected criteria. Which one of the following strategies will meet his requirements?

- A. Use the GetView method on the database object to access a view which meets the criteria.
- B. Use the Search method on the database object to generate a collection based on the criteria.
- C. Use the Search property on the database object to generate a collection based on the criteria
- D. Use the CreateView method on the database object to create a view with the appropriate documents

Answer: B

15. Which one of the following is needed to use ODBC in Lotus Domino?

- A. The data source must be identified.

- B. The ODBC driver must be available.
- C. The data source must be identified using a supported ODBC driver at the machine using the driver
- D. The data source must be identified using a supported ODBC driver at the server to which the machine connects.

Answer: C
