Exam : Citrix 1Y0-258

Title : Citrix Presentation Server 4.0:Support

1. Scenario: Users in the Toronto office are complaining that print jobs directed to network printers take a long time to complete. Bandwidth to this office is nearing saturation, and a network upgrade will not be completed for several months. In the interim, how can you improve the user's printing experience?

- A. Printer bandwidth should be set to 20 Kbps for all servers.
- B. The Printer Properties Retention policy should be enabled for roaming profile only.
- C. Printer bandwidth should be set to 20 Kbps through a policy for all Toronto-based computer IP addresses.
- D. The Print Job Routing policy should be configured so that users always connect indirectly as a client printer.

Answer: D

2. Scenario: A Network Administrator decides to reconfigure certain settings on the Presentation Server. The administrator enables SpeedScreen Browser Acceleration support for GIF images. What is the benefit of this?

- A. Image resolution is better.
- B. More transparent images can be played in the web pages.
- C. Bandwidth is reduced because of the absence of animation.
- D. Users can play images in their web browser from the Presentation Server.

Answer: C

3. Scenario: A license file allocated from MyCitrix.com with host name MERICA was installed on the server named LICSSER. Every time the Network Administrator tries to connect to the Presentation Server, an error appears stating that the license server cannot be contacted. What could be the cause of this issue?

- A. The license allocated is an invalid license.
- B. The license server is not in the same domain as the Presentation Server.
- C. The license needs to be deployed through the License Management Console.
- D. The host name used to allocate the license is different from the license server name.
- E. The account used to allocate the license is not a member of the domain administrators group.

Answer: D

4. Scenario: You have deployed a new mapping application that is to be used by your Sales and Marketing department to track customers and sales leads by zip code. Because the application was inadvertently made available to all domain users, you see that a few people other than Sales and Marketing users are accessing the application. You learn that your company purchased only 50 user licenses; this is sufficient only for Sales and Marketing users. When you approach your manager regarding licensing compliance, he advises you that because typical usage is only approximately 30 users, it is acceptable to allow all domain users to continue to access the application with the current number of licenses. However, he asks you to monitor the usage and ensure that no more than 50 instances are open at any time.

Which two actions should you perform? (Choose two.)

- A. Limit users to only one instance of the application.
- B. Limit the number of instances allowed in the server farm.
- C. Create a Resource Manager published application and use the Count Metric.
- D. Use Presentation Server policies to limit the total number of concurrent sessions that a user can have running at the same time.
- E. Limit users to the Sales and Marketing group during business hours, and allow all domain users to have access after business hours.

Answer: BC

5. How can a Network Administrator use Resource Manager to monitor Presentation Server problems without using the full status display screen?

- A. By using the Resource Manager Alert tab
- B. By using the Resource Manager Reports tab
- C. By using the Resource Manager Watcher tab
- D. By using the Resource Manager Properties tab

Answer: C

6. Scenario: An administrator wants to adjust the threshold for a specific alarm setting for Page File utilization. The value in the yellow threshold field will be changed from 40 to 50 and the value in the red threshold field will be changed to 60; this action will result in the red threshold having a higher value. How can this be done?

- A. By right-clicking the desired metric and selecting "Properties"
- B. By opening the Event Log Consolidator and changing the alert settings
- C. By clicking the server farm node and editing the farm properties settings
- D. By expanding the Resource Manager node and double-clicking the desired metric

Answer: A

7. Which ICA optimization feature can be used to ensure that the client session is not disconnected from the server when the client loses connectivity?

- A. ICA Keep Alive
- B. Smooth Roaming
- C. Session Reliability
- D. Auto Client Reconnect

Answer: C

8. What may cause Load Manager to distribute load incorrectly?

- A. Data store update rate

- B. Data collector update communications
- C. Database Connection Server update rate
- D. Farm Metric Server update communication

Answer: B

9. What happens when a collision occurs and the DLLs for the application are relocated to an available base memory address?

- A. The DLL is deleted from the application.
- B. The registry key of the DLL changes to 0.
- C. The registry key of the DLL changes to 1.
- D. The DLL can no longer be shared with other applications.

Answer: D

10. Which command is used from the command line interface to validate the integrity of the data in the data store database?

- A. DSVALT
- B. DSVIEW
- C. DSMAINT
- D. DSCHECK

Answer: D

11. Scenario: Brook Bank & Company purchased a new accounting application to improve their employees' efficiency and help make the company more competitive among the leading accounting firms in Mans County. The IT administrator of Brook Bank wants to know the resource requirement of the new application that has been installed in their pilot environment. This information is available in a report.

Which console can be used to generate the report?

- A. Access Suite Console
- B. Presentation Server Console
- C. Microsoft Management Console
- D. Resouce Manager Web Console

Answer: A

12. Scenario: A Network Administrator wants to display the names of applications and the server load of a particular zone within a server farm using a command line utility. Which command can be used for this purpose?

- A. QFARM /LOAD
- B. QFARM /ZONEAPP
- C. QFARM /ZONELOAD
- D. QFARM /ZONE(APP/LOAD)
- E. QFARM /ZONEAPP/ZONELOAD

Answer: B

13. Which component gathers historical metrics from all Presentation Servers on a daily basis and forwards the data to the Summary Database?

- A. Data Collector
- B. Farm Metric Server
- C. Database Connection Server
- D. Summary Database Collector

Answer: C

14. When using ICA Priority Packet Tagging, the _____ would be used to change the ICA session priority based on the virtual channel data being transmitted. (Fill in the blank with the correct option.)

- A. Windows Registry
- B. Access Suite Console
- C. Citrix Connection Center
- D. Citrix Management Console

Answer: A

15. Scenario: Users are complaining that they experience slow and excessively long waiting periods when accessing data from their Presentation Servers. How can a Network Administrator determine if this issue is related to the fact that the farm load has reached its maximum capacity?

- A. Run QFARM /LOAD to verify if the load value is 5000
- B. Run QFARM /LOAD to verify if the load value is 1000
- C. Run QFARM /LOAD to verify if the load value is 10000
- D. Run QFARM /LOAD to verify if the load value is 20000

Answer: C
