Exam Name: Sun Certified MySQL 5.0 Database Administrator Part II

Q & A : 138 Q&As

Pdf Demo

Quality and Value for the 310-811 Exam

[Just4Exams Practice Exams](#) for SUN 310-811 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

100% Guarantee to Pass Your 310-811 Exam

If you do not pass the 310-811 exam on your first attempt using our Just4Exams **310-811 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

Downloadable, Interactive 310-811 Testing engines and PDF Version

Our Exam Preparation Material provides you everything you will need to take an examination. Details are researched and produced by [SUN Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : SUN 310-811

Title : Sun Certified MySQL 5.0 Database Administrator Part II

1. Is the following statement true or false? The username you use to connect to MySQL must be the same as the login used to access the operating system.

- A. true
- B. false

Answer: B

2. Which of the following statements are true of how access control is based?

- A. It is based off of an access control table in the mysql database.
- B. It is based off of grant tables in the mysql database.

- C. It is based off of an access control list stored in the data directory.
- D. It is based off of an access control list stored inside the .frm files of each table.

Answer: B

3. How can the SHOW PROCESSLIST command be helpful when optimizing queries?

- A. It shows if a query is using an index or not.
- B. It shows how the server processes a query.
- C. If checked periodically, it can reveal queries that cause other queries to hang.
- D. It shows the percentage of processing power that each query is using on a server.

Answer: C

4. With replication, what on the master is used to send commands to the slave?

- A. The relay log.
- B. The binary log.
- C. The SQL Thread.

Answer: B

5. Consider the following:

```
mysql> EXPLAIN SELECT Name FROM Country WHERE Code = 'CANG'
***** 1. row *****
```

```
id: 1
select_type: SIMPLE
table: Country
type: const
possible_keys: PRIMARY
key: PRIMARY
key_len: 3
ref: const
rows: 1
Extra:
```

Which of the following best describes the meaning of the value of the type column?

- A. The table has exactly one row.
- B. Several rows may be read from the table.
- C. Only one row of all its rows need to be read.

Answer: C

6. Given the following MyISAM table structure:

```
mysql> desc city;
+-----+-----+-----+-----+-----+-----+
| Field | Type | Null | Key | Default | Extra |
+-----+-----+-----+-----+-----+-----+
| ID | int(11) | | PRI | NULL | auto_increment |
| Name | char(35) | | | | |
| CountryCode | char(3) | | | | |
| District | char(20) | | | | |
| Population | int(11) | | MUL | 0 | |
+-----+-----+-----+-----+-----+-----+
```

and the following SQL statement:

```
SELECT Population
FROM city
WHERE Population = 10000
ORDER BY Population
LIMIT 5;
```

which of the following statements best describes how MySQL optimizer executes the query?

- A. The optimizer uses the primary key column ID to read the index values, then uses the index on Population to filter the results. The optimizer will always choose to use a unique index first, then use a secondary index if available.
- B. The optimizer uses the index on the Population column to search and filter the WHERE clause. A temporary table is used to perform a filesort on the results, and then only 5 records are returned to the client.
- C. The optimizer uses the index on the Population column to search, filter and sort the Population column, then returns 5 records to the client. The optimizer does not need to read the data rows, and can return values from the index only, because the index contains just integer values that form a leftmost prefix for the key.

D. The optimizer uses the index on the Population column to search, filter and sort the Population column, and returns 5 records to the client. The optimizer does not need to read the data rows, and can return values from the index only because only those columns were specified in the SELECT statement.

E. The optimizer will never read data from disk, since MySQL caches both data and index in the key buffer.

Answer: D

7. Which of the following best describes why InnoDB tables should always have primary keys and why they should be short?

A. Because InnoDB uses primary keys to locate tables, and shorter keys make quicker lookups.

B. Because InnoDB uses primary keys to locate table rows, and shorter keys make quicker lookups.

C. Because InnoDB stores pointers in a log to all the primary keys and shorter keys make this log smaller.

Answer: B

8. Which of the following best describes how the relay log works?

A. It records the times when the slave connects to the master.

B. When a slave receives a change from the master, it is recorded in the relay log first and processed later.

C. When a slave receives a change from the master, it is processed first and then recorded in the relay log.

Answer: B

9. Which of the following statements about the slow query log is true?

A. The slow query log will always contain just slow queries.

B. The slow query log may not always contain just slow queries.

C. The slow query log always logs more than just slow queries.

Answer: B

10. Consider the following query:

```
GRANT ALL ON world.* TO 'web'@'hostname'
```

What privileges would this give this user?

A. All privileges including GRANT.

B. All privileges except GRANT.

C. SELECT, INSERT, UPDATE and DELETE.

D. ALL can not be used when granting privileges.

Answer: B

11. The stored function year_to_date is created by the 'root'@'localhost' account as follows:

```
CREATE FUNCTION year_to_date ()
```

```
RETURNS DECIMAL(10,2)
```

```
SQL SECURITY DEFINER
```

```
BEGIN
```

```
...
```

```
END;
```

Within the routine body, a number of calculations are made on data in the financials table and the calculated value is returned. The only account which can access the financials table is 'root'@'localhost'.

If a client connects with the account 'joe'@'localhost' and calls the year_to_date function, what will happen?

A. The function will always execute as if it was 'root'@'localhost' that invoked it since SQL SECURITY DEFINER has been specified.

B. The function will not execute, as 'joe'@'localhost' does not have access to the financials table

C. The function will not execute as SQL SECURITY DEFINER has been specified. It would execute if instead SQL SECURITY INVOKER had been specified

D. If the account 'joe'@'localhost' has the EXECUTE privilege on year_to_date, the function will complete successfully

Answer: D

12. Which of the following statements are required to create a key cache of 4 MB, assign the MyISAM table world.City to it and preload the index?

A. mysql> SET GLOBAL city_cache.key_buffer_size = 4194304;mysql> CACHE INDEX world.City IN city_cache;mysql> LOAD INDEX INTO CACHE world.City;

B. mysql> ALTER TABLE world.city KEY_CACHE = 4194304;

C. mysql> CREATE CACHE FOR world.City SIZE = 4194304;

D. It is not possible to create a key cache for a specific MyISAM table, only the global key cache can be used.

Answer: A

13. How can stored routines be used to check for constraints or legality of incoming data?

A. They can make use of the VALIDATE DEFINER setting.

- B. They can not be used to check for constraints or legality of data.
- C. They can check and only perform an action if the incoming values match a specified value.

Answer: C

14. Consider the following GRANT statement:

GRANT USAGE ON *.* TO 'kofi'@'localhost' IDENTIFIED BY 'password'

What is the implications of executing that statement?

- A. Kofi can access all database objects.
- B. Kofi can access all his tables.
- C. Kofi can display server system and status variables.
- D. Kofi can grant privileges to others.
- E. Kofi can access all database objects belonging to localhost.

Answer: C

15. When working with stored routines, which of the following are true in regards to the effect on the amount of data exchanged between client and server?

- A. They may increase the amount of data exchanged.
- B. They can help reduce the amount of data exchanged.
- C. They have no effect on the amount of data exchanged.

Answer: B
