

## [Cisco 642-342](#)

**Exam Name:** Content Networking Exam (CN)

**Q & A :** 70 Q&As

***Pdf Demo***

### **Quality and Value for the 642-342 Exam**

[Just4Exams Practice Exams](#) for Cisco Content Networking 642-342 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

### **100% Guarantee to Pass Your 642-342 Exam**

If you do not pass the Content Networking 642-342 exam on your first attempt using our Just4Exams **642-342 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

### **Downloadable, Interactive 642-342 Testing engines and PDF Version**

Our Exam Preparation Material provides you everything you will need to take a [Content Networking certification](#) examination. Details are researched and produced by [Cisco Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : Cisco 642-342

Title : Content Networking Exam

1. Refer to the exhibit. The exhibit shows a Content Engine with WCCP enabled between the Content Engine and the router. The Client browser is configured with an HTTP proxy address of 1.2.3.4. What does this illustrate?

- A. proxy caching
- B. transparent caching
- C. reverse proxy caching
- D. transparent redirection

Answer: A

2. Which statement is true about using FTP to acquire files and directories?

- A. You can use FTP to acquire files and directories to the designated channel directory within your root Content Engine.
- B. You cannot use FTP to copy or move files and directories to the designated channel directory within your Content Distribution Manager Import directory.
- C. You can use FTP to copy or move files but not directories to the designated channel directory within your Content Distribution Manager Import directory.
- D. You can use FTP to copy or move directories but not files to the designated channel directory within your Content Distribution Manager Import directory.

Answer: A

3. Customer ABC wants to deploy Cisco Content Engines to perform URL filtering and VOD streaming. The customer has many \*.mov VOD training files that are frequently requested in the branch offices and played through the Apple QuickTime player. The files need to be pre-positioned to branch office Content Engines and served by Content Engines to client desktops. Currently standalone Smartfilter servers are being used to do content filtering, but the customer would like to take advantage of the SmartFilter on-box feature in the Cisco Content Engine. Which license should customer ABC require?

- A. Microsoft Windows Media License
- B. Real Helix Universal Gateway License
- C. Multicast Replication License
- D. Websense Content Filtering License
- E. Smartfilter Content Filtering License

Answer: E

4. Which HTTP return code indicates a successful client response?

- A. 1xx
- B. 2xx
- C. 3xx
- D. 4xx
- E. 5xx

Answer: B

5. What is the correct TCP three-way handshake connection setup?

- A. SYN - FIN - ACK
- B. SYN - DATA - FIN
- C. SYN - DATA - ACK
- D. SYN - SYN/ACK - ACK
- E. SYN - SYN/ACK - FIN/ACK

Answer: D

6. What are three benefits of terminating SSL traffic in a Content Switch? (Choose three.)

- A. eliminates the need for SSL
- B. maintains security by allowing data to be decrypted, processed, and re-encrypted within a single device
- C. enables the Content Switch to make load balancing decisions on HTTP-layer information
- D. reduces the number of digital certificates required in most web hosting environments
- E. reduces or eliminates server burden of negotiating SSL handshakes

Answer: BCE

7. You are using Content Switching for Server Load Balancing. What is the purpose of sticky connections?

- A. They ensure that a TCP session remains active.
- B. They ensure an even load balanced server farm.
- C. They provide the ability to have connections from a client directed to the same server.
- D. They provide a means to collect statistics for an electronic commerce application within a content network.
- E. They provide the ability to have connections from a client directed to multiple servers without losing session information.

Answer: C

8. With two GSSs (Primary-GSSM and Standby-GSSM), you make a change to a domain list on the Primary-GSSM. How do you synchronize the configuration change you just made on the Primary-GSSM to the Standby-GSSM)?

- A. Issue the command gss start.
- B. Do nothing. The configuration is synchronized automatically when a change is made to the dns database.
- C. Issue the command gssm primary-to-standby.
- D. Issue the command gss enable.

Answer: B

9. What is the primary function of DNS?

- A. to replace DHCP
- B. to host file manager
- C. to serve as a source location on the Internet
- D. to resolve a client IP address to a MAC address
- E. to serve as a host name to IP address resolution

Answer: E

10. Why is the three-way handshake mechanism required for TCP session establishment?

- A. It keeps both sides of a connection from timing out.
- B. It ensures that both ends of a connection are synchronously established.
- C. There is less chance of interference and the session getting dropped.
- D. It ensures the connection is established between the correct stations.

Answer: B

11. The transaction-logs enable command enables transaction logging. Which file will contain the WMT server logs?

- A. local1/logs working.log
- B. local1/logs/wmt.log
- C. local1/logs/export/working.log
- D. local1/service\_logs/wmt\_start\_log\_latest

Answer: C

12. You should configure content playback and replication bandwidth through the \_\_\_\_\_ GUI.

- A. Content Engine
- B. Content Router
- C. Content Services Switch
- D. Content Distribution Manager

Answer: D

13. An NTLM-authenticated user is promoted for login name and password when attempting to access the public Internet. What happens to the user's request if he cannot provide valid user credentials?

- A. Access to the Internet will be allowed and the user's Internet activities will be logged by IP address.
- B. The user will be denied all access to the Internet.
- C. User access to the Internet will have less priority, resulting in slower Internet access than authenticated users.
- D. The user's manager will receive an automatic notification that the user failed to provide valid credentials.

Answer: B

14. Which two statements are true about Content Routers in Application and Content Networking System? (Choose two.)

- A. Content Routers store on-demand and pre-positioned content.
- B. Content Routers route content to the edges of a content network.
- C. Content Routers contain the IGP routing tables for the routed domain.
- D. Content Routers act as authoritative DNS servers for the routed domain.
- E. Content Routers choose the most suitable Content Engines to handle a particular clients request.

Answer: DE

15. You are using the active/standby method to implement a high availability Content Switching design. What are three benefits? (Choose three.)

- A. less expensive
- B. easier to troubleshoot
- C. predictable traffic path
- D. increases the overall performance
- E. predictable failover behavior

Answer: BCE
