Exam : IBM COG-132

Title : IBM Cognos 8 BI Metadata Model Developer

1. In a transitive relationship scenario, what problems exist when reporting from the tables below?

- A. The Order table must be included in each query.
- B. The Order Detail table has conflicting cardinalities.
- C. Outer joins are generated when querying from Customer.
- D. There is more than one possible path between the tables.

Answer: D

2. Which of the following is true regarding the operational data structure illustrated below?

- A. It illustrates a parallel relationship.

- B. It should be consolidated into one table.
- C. It should be examined for a connection trap.
- D. The cardinality between the tables should be reversed.

Answer: C

3. The database table below would typically be found in what data structure?

- A. Union
- B. Normalized
- C. Operational
- D. Star schema

Answer: D

4. What question should a data modeler answer before accepting this proposed operational data structure?

- A. Should all three tables be consolidated into one?
- B. Should the cardinalities between the tables be reversed?
- C. Are Branch and Employee dimension tables or fact tables?
- D. Is there a direct relationship between Branch and Employee?

Answer: D

5. The illustration below represents which of the following data traps?

- A. Bridge
- B. Connection
- C. Parallel relationship
- D. Many-to-many relationship

Answer: C

6. Which of the following objects in the Framework Manager environment acts as a container and provides a unique name for objects?

- A. model
- B. query item
- C. namespace
- D. query subject

Answer: C

7. What does a star schema database structure typically consist of?

- A. De-normalized hierarchy of dimension tables and fact tables.
- B. Normalized dimension tables and detailed fact tables.
- C. Normalized dimension tables and summarized fact tables.
- D. De-normalized dimension tables and fact tables.

Answer: D

8. Which of the following is true of an OLAP data structure?

- A. Comprised of normalized dimension and fact tables.
- B. Organizes dimension tables into hierarchies and levels.
- C. Allows "real time" analysis against disparate data sources.
- D. Cardinality between tables is typically configured as inner joins.

Answer: B

9. Which of the following data structures typically contain normalized data?

- A. Cube
- B. Flat file
- C. Operational
- D. Star schema

Answer: C

10. In Cognos 8, what are the two distinct model types authors can work with?

- A. OLAP and DMR
- B. Dimensional and DMR
- C. Relational and SAP BW
- D. Relational and Dimensional

Answer: D
