Exam : HP HP0-205

Title : Supporting the Enterprise Modular Library

1. Compared to an Ultrium 460 tape drive, the transfer rate for native data of an Ultrium 960 drive is ____.

- A. slightly lower
- B. approximately the same
- C. approximately 2 times higher
- D. more than 2.5 times higher

Answer: D

2. What is the most critical factor affecting performance at the disk subsystem during a backup?

- A. disk connection speed

- B. disk fragmentation
- C. tape feed speed
- D. compression ratio

Answer: B

3. When replacing a failed Ultrium tape drive in an EML E-Series tape library, the library ____.

- A. must be offline with no I/Os going to any other drives
- B. must be powered off before replacing the new drive
- C. automatically recognizes the new drive without rebooting
- D. must be rebooted to recognize the new drive

Answer: D

4. Which file factor does NOT affect performance of tape devices in a SAN environment?

- A. extension
- B. compressibility
- C. directory depth
- D. size (larger is better)

Answer: A

5. Which HP software can be used to calculate the actual compression ratio of backup data?

- A. Performance Analysis Tool
- B. Library and Tape Tools
- C. I/OMETER
- D. DPMETERM

Answer: B

6. Which component of the EML E-Series tape library is located in the top cPCI slot in the library base module card cage?

- A. Interface Manager memory
- B. robotics controller
- C. interface controller
- D. Interface Manager

Answer: B

7. Where do you find information regarding backup performance in a SAN environment? Select TWO.

- A. SAN Design Guide
- B. EBS Design Guide
- C. EBS Compatability Matrix
- D. Performance Troubleshooting Guide
- E. EML E-Series User Guide

Answer: BD

8. Which option of Command View TL is used to collect configuration information and execute a Device Analysis test on the selected device or devices for an EML E-Series tape library?

- A. backup configuration
- B. get config
- C. report event logs
- D. generate support ticket

Answer: D

9. You are at a customer site to repair an EML E-Series tape library. What is the first thing to consider before replacing any defective parts?

- A. the part replacement procedure
- B. how the fault was caused
- C. customer site procedures
- D. firmware revision levels

Answer: C

10. Which HP tool is used to measure sequential performance?

- A. Performance Analysis Tool
- B. TapePerf
- C. I/OMeter

D. HPReadData

Answer: A

11. Excessive R/W-head wear due to tape repositioning is a result of not providing the correct ____.

- A. feed speed
- B. block size
- C. file size
- D. compression ratio

Answer: A

12. Which EML E-Series tape library FRU has a Command Line Interface port?

- A. interface controller card
- B. robotics controller card
- C. Interface Manager memory card
- D. Interface Manager card

Answer: D

13. When replacing a failed Interface Manager card in an EML E-Series tape library, what must you do to preserve the original configuration information?

- A. Save the configuration to floppy disk and recover the configuration using the serial Command Line Interface.
- B. Print the configuration to file and then restore using ftp.
- C. Backup the configuration and then restore it using Command View TL.
- D. Move the memory card from the old to the new Interface Manager card.

Answer: D

14. An EML E-Series tape library is powered on. Before opening the library front door, ____.

- A. operable robotics must be parked
- B. the library must be powered off
- C. the Operator Control Panel must indicate "service request"
- D. cartridges must be removed from the load ports

Answer: A

15. You are at a customer site to repair an EML E-Series tape library. What is the last thing you must do after replacing any defective parts?

- A. Identify the cause of the initial fault.
- B. Close the front and rear doors.
- C. Test the library functionality.
- D. Check the cabling.

Answer: C
