Exam : HP HP0-461

Title : Supporting the Enterprise Virtual Array (EVA) Storage Family

1. When is the appropriate time to create the container for a three-phase snapclone?

- A. immediately before its actual use
- B. well before its actual use
- C. immediately before the cache is flushed
- D. between the cache mode swap and the "flick-of-the-switch" commitment

Answer: B

2. Which cache mode is used during the three-phase snapclone process just before the "flick-of-the-switch" commitment is issued?

- A. write-back

- B. write-through
- C. write-behind
- D. read-ahead

Answer: B

3. By default, newly added physical disk drives in an EVA storage system are automatically added to a ____.

- A. host folder
- B. pool of virtual disks
- C. secondary disk group
- D. pool of ungrouped disks

Answer: D

4. Within the Command View EVA host wizard, what does the WWNs pulldown display?

- A. assigned host WWNs seen by the array
- B. unassigned host WWNs seen by the array
- C. assigned host WWNs seen by the Storage Management Server
- D. unassigned host WWNs seen by the Storage Management Server

Answer: B

5. Which replication method is compliant with both the Fast Recovery Solution and Volume Shadow Services?

- A. preallocated snapshot
- B. virtually instantaneous snapclone
- C. space efficient snapshot
- D. three-phase snapclone

Answer: D

6. The size of the backend loop switch event log is limited to 3000 events. What happens after the maximum is reached?

- A. Event logging stops.
- B. The oldest events are overwritten.
- C. A new log file is created.
- D. The event log is automatically cleared.

Answer: B

7. What does the Storage System Scripting Utility allow?

- A. fault reporting to a remote connection
- B. the issuing of commands to manage the EVA
- C. use of scripts compiled for HSGxx controllers
- D. communication between Storage Management Appliance and HSV110 controllers

Answer: B

8. Which Storage System Scripting Utility command interrogates the array and creates a script that can be used later to re-create the system?

- A. monitor config "filename"
- B. sssuconfig cell "filename"
- C. save configuration "filename"
- D. capture configuration "filename"

Answer: D

9. Which restriction applies to a "snapclone replica resync"?

- A. The target is presented.
- B. The two vdisks differ in size.
- C. The two vdisks had no previous snapclone relationship.
- D. The two vdisks participate in sharing relationships.

Answer: C

10. Which management interface is available for the model 352 Fibre Channel loop switch?

- A. telnet using a serial line (RS232)
- B. hyperterminal using the device loops
- C. GUI using a web browser
- D. menu buttons using the Operator Control Panel

Answer: C
