Exam Name: HP Storage Data Protector 6.0 Fundamentals for Windows

Q & A : 130 Q&As

Pdf Demo

Quality and Value for the HP0-918 Exam

[Just4Exams Practice Exams](#) for HP Certification III HP0-918 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

100% Guarantee to Pass Your HP0-918 Exam

If you do not pass the Certification III HP0-918 exam on your first attempt using our Just4Exams **HP0-918 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

Downloadable, Interactive HP0-918 Testing engines and PDF Version

Our Exam Preparation Material provides you everything you will need to take a [Certification III certification](#) examination. Details are researched and produced by [HP Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : HP HP0-918

Title : HP Storage Data Protector 6.0 Fundamentals for Windows

1. What communication technique is used for disk agent to media agent data transfer if the agents do NOT reside on the same host?

- A. RMI over LAN
- B. remote agents
- C. stream sockets
- D. pipe mechanisms

Answer: C

2. What are the benefits of enhanced incremental over conventional incremental backups? (Select two.)

- A. higher backup throughput

- B. detects renamed and removed files
- C. backup detects files with attribute changes
- D. backups are more secure due to better encryption
- E. files with longer names are detected and backed up

Answer: BC

3. Which interconnect technology is supported for shared tape device resources in a cluster where the Cell Manager is installed in the cluster?

- A. SCSI
- B. Ethernet
- C. Fibre Channel
- D. SATA and SCSI

Answer: C

4. Which hardware is automatically reconfigured by ASR (Automated System Recovery) if that hardware is replaced with a different type or size as part of the disaster recovery process?

- A. Hard drive
- B. Video card
- C. Network card
- D. Host bus adapter

Answer: A

5. What is a media pool?

- A. a collection of media of the same age
- B. a logical collection of media that belong together
- C. a concept that enables faster backup and restore
- D. a physical collection of media that is used by the same device

Answer: B

6. Which Data Protector feature simplifies shared access of several hosts to a physical device?

- A. redundant paths
- B. multipath devices
- C. device locking mechanism
- D. multiple device connections

Answer: B

7. How can you collect debug files from distributed Data Protector clients in the environment?

- A. Use the omnidlc command.
- B. Use the devbra collector.
- C. Use the omnitrig process.
- D. Use the Web Reporting GUI.

Answer: A

8. You are not able to configure a changer device on a remote media agent with the Data Protector SSE (Single Server Edition). What can you do to resolve this problem?

- A. Configure host access to the LUN.
- B. Install the required device driver for the library.
- C. Disable the RSM service on the agent system.
- D. Upgrade Data Protector to support remote devices.

Answer: D

9. How can you prevent multiple hosts from simultaneously attempting to utilize a device in one Data Protector cell?

- A. logical lock
- B. device lock
- C. lock names
- D. physical lock

Answer: C

10. Between which instances is data moved during a disk staging object copy process?

- A. Media Agent and Disk Agent
- B. Media Agent and Media Agent

- C. Backup Session Manager and Disk Agent
- D. Backup Session Manager and Media Agent

Answer: B

11. How can you configure a mixed media library with Data Protector?

- A. Set up a MultiPath device.
- B. Set up one library definition per media type.
- C. Set the media type manually on the library slots.
- D. DP automatically configures the different media slots.

Answer: B

12. Which Data Protector process controls an active backup session?

- A. the DA (disk agent) on the Cell Client
- B. the MA (media agent) on the Cell Client
- C. the CRS (cell request server) on the Cell Manager
- D. the BSM (backup session manager) on the Cell Manager

Answer: D

13. The Data Protector Backup Session Manager (BSM) runs on which system or systems in the cell?

- A. client only
- B. cell manager only
- C. client and cell manager
- D. dedicated installation server

Answer: B

14. Which media agent program can be used for interactively sending SCSI commands to a tape library?

- A. lma
- B. bma
- C. uma
- D. cma
- E. mma

Answer: C

15. What are the three key qualifiers Data Protector uses to identify file system objects in the database? (Select three.)

- A. device
- B. filenames
- C. hostname
- D. mountpoint
- E. description
- F. rawdisk sections

Answer: CDE

16. By default, which file is the Data Protector Database recovery file?

- A. obdb.dat
- B. obrindex.dat
- C. obdatafiles.dat
- D. obdbrecovery.dat

Answer: B

17. Which command checks the Data Protector services, the media management database consistency, and that there is at least one backup of the Data Protector database?

- A. omnichck
- B. omnihealth
- C. omnidbck
- D. omnihealthck

Answer: D

18. A tape library with two drives is connected to two hosts (host A and host B) using SCSI. Each host is accessing one drive through a dedicated SCSI connection. Host B also has access to the robotics interface. Which statement is true in this configuration?

- A. This configuration is not possible in a SCSI environment because all hosts need physical access to the robotics controller.
- B. Host A will need the media agent to control the robotics and perform all library operations for the local drive.

- C. Host B will need the media agent to control the robotics and perform all library operations.
- D. Both hosts A and B will require a "direct library" configuration to allow shared network control of the robotics.

Answer: C

19. What must first be done on a Windows NT cell manager before upgrading Data Protector to version 5.5?

- A. Ensure that a Windows installation server is installed.
- B. Ensure the current Data Protector version is at the highest patch level.
- C. Install the latest Windows NT service pack.
- D. Upgrade Windows NT to a higher Windows version.

Answer: D

20. What is the maximum recommended size of a file depot for Windows?

- A. 50GB
- B. 100GB
- C. 200GB
- D. 600GB

Answer: A
