**Exam Name:** *Implementing HP StorageWorks Virtual Library Systems*

**Q & A :** 67 Q&As

***Pdf Demo***

### **Quality and Value for the HP0-J28 Exam**

[Just4Exams Practice Exams](#) for HP Certification I HP0-J28 are written to the highest standards of technical accuracy, using only certified subject matter experts and published authors for development.

### **100% Guarantee to Pass Your HP0-J28 Exam**

If you do not pass the Certification I HP0-J28 exam on your first attempt using our Just4Exams **HP0-J28 testing engine and pdf study guide**, we will give you a FULL REFUND of your purchasing fee.

### **Downloadable, Interactive HP0-J28 Testing engines and PDF Version**

Our Exam Preparation Material provides you everything you will need to take a [Certification I certification](#) examination. Details are researched and produced by [HP Certification](#) Experts who are constantly using industry experience to produce precise, and logical.

Exam : HP HP0-J28

Title : Implementing HP StorageWorks Virtual Library Systems

1. When would you opt to use an HP Data Protector environment with Advanced Backup to Disk licensing in conjunction with a virtual library system instead of a traditional backup-to-disk solution? (Select two.)

- A. when you want to use target-based compression
- B. when the environment consists mainly of LAN clients
- C. when you want to use existing SAN storage or locally attached storage
- D. when there are many SAN hosts writing to disk
- E. when there are relatively few SAN hosts writing to disk

Answer: AD

2. How is storage space assigned between the virtual cartridges and the physical disks in the HP StorageWorks Virtual Library System storage pool?

- A.Storage space is dynamically assigned as it is used.
- B.Each virtual library has a fixed amount of storage space available for cartridges to use.
- C.Each virtual tape drive has a fixed amount of storage space available for cartridges to use.
- D.When the media is created, full storage space is reserved within the storage pool.

Answer: A

3. What is a key functionality offered with HP StorageWorks Virtual Library System storage virtualization?

- A.fully automated capacity addition and removal
- B.reassignment of resources as requirements change
- C.ability to enable and disable tape compression on an as-needed basis
- D.automated LUN to host assignment

Answer: B

4. What do the HP StorageWorks Virtual Library System 6200/6600 appliances provide? (Select two.)

- A.resiliency against a single MSA20 volume failure
- B.support of up to two MSA20 disk enclosures at any time
- C.online addition of physical storage capacity
- D.fewer media failures due to the use of virtual media
- E.performance enhancements for single file restores due to lower tape load and positioning/seek times

Answer: DE

5. Where is the virtual media data (user backup data) on the VLS located?

- A.on a dedicated RAID volume
- B.striped across all RAID LUN volumes
- C.stored on the operating system volume
- D.in a special partition on the first RAID volume

Answer: B

6. With the maximum number of supported nodes, running the VLS software version 3.x, how many arrays are supported in a VLS9000?

- A.8
- B.16
- C.32
- D.64

Answer: B

7. What is an advantage of using the automigration feature of virtual library systems?

- A.The tapes are analyzed during backup to migrate all files. After the content is decoded, only those files are compared to the same files from the previous backup.
- B.It leverages object-level differencing code with a design centered on performance and scalability.
- C.The destination tapes are block-by-block copies of the source tapes and can easily be restored by any tape library to which the backup application has access.
- D.It delivers fastest restores from recently backed up data, maintains the complete most recent copy of backup data, but eliminates duplicate data in previous backups.

Answer: C

8. What are features and benefits of accelerated data deduplication? (Select two.)

- A.delivers a platform with integrated data deduplication
- B.uses hash-based chunking code with a design focused on compatibility and cost
- C.leverages object-level differencing code
- D.supports performance increase by adding nodes
- E.provides pre-processing technology - data is first deduplicated and then compressed

Answer: CD

9. What is oversubscription in the context of virtual libraries?

- A.more capacity allocated than physically installed
- B.more libraries created than currently licensed
- C.more virtual drives created than currently licensed
- D.more data streams than the library can process

Answer: A

10. What is a benefit of using HP Data Protector Software's capacity-based licensing model with an HP Virtual Library System?

- A. Deduplication is included in the capacity license.
- B. Four times the license capacity is available for short-term use.
- C. It simplifies management of the virtual library devices.
- D. No penalty is imposed when configuring additional virtual drives or libraries.

Answer: D

11. Which statements are true regarding Echo Copy, assuming the destination library is unpartitioned? (Select two.)

- A. The destination library is not visible to the backup application, so it does not require licensing.
- B. Echo Copy uses an incremental change copy policy.
- C. The destination library can be used for both backup and copy operations.
- D. The backup application is aware of any copy failures to ensure media management consistency.
- E. Copy traffic is no longer routed through a backup server.

Answer: AE

12. What are benefits of storage pools in a virtual library? (Select two.)

- A. Storage pools keep specific backup data physically separate from other backup data.
- B. Multiple pools minimize the impact of a catastrophic array failure.
- C. The virtual library can automatically balance backup jobs over multiple storage pools.
- D. The user can easily optimize the performance on each storage pool.
- E. Maintenance is easier on a system with multiple storage pools.

Answer: AB

13. Which statement is true regarding the Echo Copy automigration feature of virtual libraries?

- A. It allows you to automatically backup data to a virtual library and to a physical tape library simultaneously.
- B. It allows you to copy backup images from the virtual library to a disk pool without impacting the backup server.
- C. It allows you to move copies of cartridge data from the virtual library to a physical library under the control of the virtual library.
- D. It allows you to move copies of cartridge data from the virtual library to a physical library under the control of the backup application.

Answer: C

14. What are advantages of having separate zones for disk storage systems and disk-to-disk backup systems in storage area networks? (Select two.)

- A. The physical and virtual tape controllers do not discover disk controllers.
- B. Administrative and management costs are lower.
- C. Tape multipathing functionality can be used to map the physical and virtual devices.
- D. There is less host access and improved target and LUN shifting.
- E. Performance is improved, due to dedicated HBAs for disk and tape access.

Answer: AE

15. Which statement is true about automigration using the Smart Copy functionality?

- A. The backup application can immediately use the destination library if the source library fails.
- B. Smart Copy acts as a transparent disk cache to the physical library.
- C. A backup application can only use Smart Copy if it supports the SMI-S interface.
- D. Because the copy jobs are initiated from the virtual library, the backup application will not be aware of any copy failures.

Answer: C
