Exam : HP HP0-M25

Title : Assessing Web Application Security

1. Which policy focuses on auditing the functionality of the Web Application only?

- A. Standard policy
- B. Application policy
- C. Web Service policy
- D. Web Application policy

Answer: B

2. By default, what are the three response codes that would halt a scan on the first request?

- A. 404, 407, 502

- B. 200, 302, 404
- C. 304, 302, 500
- D. 403, 404, 500

Answer: A

3. What are some uses of regular expressions in WebInspect? Select two.

- A. They are used for response filtering and may be customized.
- B. They are used for filtering the vulnerabilities in the Dashboard.
- C. They are used for detecting the logout signature in a Login Macro.
- D. They are used for defect reporting when WebInspect is linked to Quality Center.
- E. They are used to group vulnerabilities in the Vulnerabilities tab in the Summary pane.

Answer: AC

4. Which is a valid option for Log File Purge settings under Application Settings?

- A. Purge When Exit
- B. By Total Scan Size
- C. By Log File Number
- D. Purge on SmartUpdate

Answer: C

5. Which statement best describes the role of the "Web Form Values" file?

- A. The WebForm Values file is part of the standard policy.
- B. The WebForm Values file is generated during a scan to capture test parameters used during the scan.
- C. The WebForm Values file contains parameter names and provides static values to be submitted when testing webforms.
- D. The WebForm Values file is used to establish and maintain "state" with the application by monitoring webform authentication methods.

Answer: C

6. What are the Network Authentication techniques supported by WebInspect? (Select three.)

- A. NTLM
- B. Kerberos
- C. htaccess
- D. Cybersafe
- E. HTTP Basic
- F. Retinal Scan

Answer: ABE

7. Which macro option will play and then start the scan off at its last recorded session, and none of the earlier sessions will be crawled and audited?

- A. Start Macro
- B. Login Macro
- C. Logout Macro
- D. Use macro for entry

Answer: D

8. Which option best describes a Manual Crawl (Step Mode) scan?

- A. This scan spiders the website, discovering all links and pages therein.
- B. This scan forces the user to provide all of the site pages by hand via their browser while the audit performs attacks.
- C. This scan discovers links/pages while attacking the same pages, running with multiple threads. A recursion setting allows new items discovered in the attack phase to be spidered further.
- D. This scan fully discovers the site structure first, followed by a phase of attacks of the same pages. A recursion setting allows new items discovered in the attack phase to be spidered further.

Answer: B

9. Which statement best describes the Request Retry Count function?

- A. The Request Retry Count indicates how long to wait for a response.
- B. The Request Retry Count indicates how long to wait before re-requesting the same, non-responsive page.
- C. The Request Retry Count indicates how many times to attempt a request before marking it as a null response.
- D. The Request Retry Count indicates how much time WebInspect will spend on a request before marking the requested page as a null response.

Answer: C

10. What is the difference between a Login Macro and a Start Macro? Select two.
- A. The Start Macro will run any time state needs to be re-established.
 - B. The Start Macro is used to populate the assessment with known URLs.
 - C. The Login Macro runs any time a page response matches its logout signature.
 - D. The Login Macro only runs once to gain session state at the beginning of the assessment.
 - E. The Start Macro is the Login Macro being forced to run once at the beginning of the assessment.

Answer: BC

11. Which statement best describes SmartUpdate?

- A. SmartUpdate is the process that delivers WebInspect Messages to the bottom of the Home tab.
- B. SmartUpdate is the feature that sends False Positives (FP) to the HP Support team as quality feedback.
- C. SmartUpdate is a process that retrieves updates to the local vulnerability database and any WebInspect binary updates.
- D. SmartUpdate automatically omits security checks whose specified server/application type does not match the current targetsb server/application fingerprint.

Answer: C

12. What is a logout signature?

- A. a snapshot of the session state found when the user has lost session state
- B. a regular expression used to identify those responses that indicate session state has been lost
- C. the toolbar feature in Web Macro Recorder which automatically determines the macros regular expression
- D. a user-supplied keyword that will be inserted into the WebInspect scan data to indicate each response where a logout occurred

Answer: B

13. Which regular expression best matches the string 345-12-9876?

- A. d
- B. d*.\$
- C. d{3-2-4}
- D. d{3}-d{2}-d{4}

Answer: D

14. Which tool is used to create and edit the Web Form Values file?

- A. HTML Editor
- B. HTTP Editor
- C. Web Form Editor
- D. WebInspect Form Wizard

Answer: C

15. After completing a Crawl-Only scan and clicking on the Audit button, which scan policy will be used?

- A. the policy selected by the user on-screen
- B. the policy listed in the Default Scan Settings
- C. the policy specified in the Application Settings
- D. the policy specified in the Current Scan Settings

Answer: A
