Exam : Network Appliance NS0-910

Title : Network Appliance NetCache Internet Access and Security Exam

1. Which ICAP vectoring method does the anti-virus scanning use?

- A. RESPMOD_PRECACHE
- B. REQMOD_PRECACHE
- C. RESPMOD_POSTCACHE
- D. REQMOD_POSTCACHE

Answer: A

2. The NetCache appliance supports up to _____ SNMP communities.

- A. 4

- B. 8
- C. 16
- D. 32

Answer: B

3. Which FOUR are key steps in the authentication process? (Choose 4)

- A. verify protocol authentication settings (authenticates the user)
- B. verify ACL permission settings for the applicable group in the NetCache user database
- C. verify whether SmartFilter or WebWasher DynaBLocator denies the request
- D. verify connectivity to logging server
- E. allow or deny the request, based on the results of the authentication process

Answer: ABCE

4. Given the following log entry from the Web Access log, with the default access log format, what does DIRECT mean?

1093891725.752 0.080 10.32.10.92 TCP_MISS/200 10177 GET http://www.sbgs.org/sbgs.htm - DIRECT/209.68.147.66 "text/html"

- A. The object must be retrieved from a parent cache.
- B. The requested URL resides outside the firewall, and the URL maps to no parents or neighbors.
- C. The URL was fetched from the source.
- D. This NetCache has no valid parents or neighbors.

Answer: C

5. Which FOUR cache control headers below are valid? (Choose 4)

- A. Cache-Control: no-cache
- B. Pragma: do-not-cache
- C. Cache-Control: no-store
- D. Cache-Control: private
- E. Pragma: no-cache

Answer: ACDE

6. Which FOUR are licensed protocols? (Choose 4)

- A. DNS caching
- B. ICAP
- C. HTTPS Proxy
- D. HTTP Proxy
- E. GRM Server

Answer: BCDE

7. Given the following entry from the Web Access log, what is the first column?

1098830250.899 0.001 10.41.72.45 TCP_HIT_ACCESS_DENIED/407 496 GET http://www.cnn.com/bob - ""

- A. the size in bits
- B. the time stamp in Greenwich standard time
- C. the ID of the request
- D. the time stamp in UNIX epoch time

Answer: D

8. What is the advantage of using multiple authentication servers with a NetCache appliance?

- A. NetCache will deny requests if authentication isn't provided within 200ms.
- B. They ensure authenticated access if authentication server fails.
- C. They ensure authenticated access across multiple domains.
- D. Authentication uses encryption and is CPU-intensive.

Answer: B

9. A router performs which one of the following functions for NetCache proxies?

- A. It fragments large packets into smaller chunks that the NetCache appliance can handle.
- B. It tags Etherchannel packets for pre-processing.
- C. It delivers inbound packets from other networks and sends outbound packets destined for other networks.
- D. It strips virus packets out before they can infect the NetCache appliance.

Answer: C

10. Which TWO of the following server types can function as a logging target for NetCache? (Choose 2)

- A. FTP

- B. CIFS
- C. HTTP
- D. NFS

Answer: AC

11. What is the difference between TCP_MISS/200 and TCP_HIT/200?

- A. The "miss" means that the requested object could not be found and an error is returned to the client. The "hit" means that TCP is used.
- B. The "miss" means...that the NetCache will use UDP instead. A "hit" means that TCP is used.
- C. he "miss" means...retrieved by the NetCache appliance. The "hit" means that the NetCache appliance already.
- D. The "miss" means that the object was in the cache but not available because either its TTL expired or the entry was flagged by a third party content filter such as a virus scanner. The "hit" means that the TTL was still current.

Answer: C

12. What is the command to view the names and locations of the log files from the command line?

- A. log -l
- B. nclog -l
- C. nclog -va
- D. show config.admin.log

Answer: B

13. Which protocol entries are recorded in the Web access log file?

- A. HTTP, FTP, RTSP
- B. HTTP, FTP, Gopher
- C. RTSP, NNTP
- D. Telnet, SNMP, SSH

Answer: B

14. Given the following entry from the Web Access log, with the default access log format, what does the entry "bob" signify?
1098830250.899 0.001 10.41.72.45 TCP_HIT_ACCESS_DENIED/407 496 GET http://www.cnn.com/bob - ""

- A. the user making the request
- B. the hostname of the appliance
- C. the page on the CNN site
- D. the client hostname making the request

Answer: A

15. Which FOUR will best prevent client disruption caused by hardware failure when using multiple proxies? (Choose 4)

- A. load balancer
- B. round-robin DNS
- C. direct browser configuration
- D. transparency utilizing WCCP
- E. autoconfiguration using a proxy.pac file

Answer: ABDE

16. Where is authentication server information logged?

- A. Web Access log
- B. Messages log
- C. FTP log
- D. client browser
- E. SMB Instant Messaging

Answer: B

17. Which FOUR steps are necessary to test that authentication is working properly with NTLM? (Choose 4)

- A. configure NTLM authentication
- B. add the appropriate ACLs to use authentication
- C. visit a Web site through the NetCache proxy
- D. inspect the Web Access log files for authentication activity
- E. enable packet tracing with pkttr and analyze the results

Answer: ABCD

18. Of the following choices, which TWO are paths to configure logging? (Choose 2)

- A. Setup > System > Logging

- B. Setup > Maintenance > Logging
- C. Setup > HTTP > Logging
- D. Setup > Utilities > Logging

Answer: AC

19. Given the following service farm configuration, which request will be directed to the ICAP application?
 config.icapv1.farm3.attr = \marketing_req_precache REQMOD_PRECACHE on rr on weak

- A. Requests about to be initiated by NetCache to the server
- B. Requests from the client before NetCache has initiated a request to the server
- C. Requests from the client after NetCache has initiated a request to the server
- D. Responses to requests initiated by NetCache after being cached on disk
- E. Responses to requests initiated by NetCache before being cached on disk

Answer: B

20. Which TWO of the following can be performed by using a proxy.pac file? (Choose 2)

- A. provide for failover protection
- B. check web pages for worms or viruses
- C. distribute requests to different NetCache proxy servers
- D. shut down the computer if the user doesn't authenticate promptly

Answer: AC
